CHEMICAL TOILET ADDITIVE CLEAR

NON FORMALDYHDE FORMULA FOR CHEMICAL TOILETS

Cyndan Chemical Toilet Additive has been formulated to provide a broad spectrum control on a variety of pathogens. The two biological active components, Glutaraldehyde and Benzalkonium Chloride, each are active against a range of bacterial types. The advantages of two active constituents is that where Glutaraldehyde may destroy certain bacteria, fungi and viruses, Benzalkonium Chloride may not, and vice-versa.

DIRECTIONS:

The application rates and effective control periods will vary greatly on the seasons of the year and the temperatures in the area, where the product is being used. Of course the effective operation system of the toilet is also a variable. However, as a general application rate, 30ml of Cyndan Chemical Toilet Additive should be added for each litre of chemical toilet capacity.

At the emptying of the Chemical Toilet the appropriate amount of Cyndan Chemical Toilet Additive should be added to the empty toilet. The general cleansing of the toilet should then take place with Cyndan Power Kleen or Cyndan Cleans All. General disinfection of the cabinet area is advised. This should be completed with Cyndan Dual 100 product range.

SAFETY: Avoid contact with eyes.

FIRST AID: If swallowed, do NOT induce vomiting, give a glass of water and seek medical attention. Contact the Poisons Information Centre (13 11 26 Australia; 0800 764 766 New Zealand). If in eyes, hold eyelids open and flush with water for at least 15 minutes.
