Mr. Danny Hamilton  
Cyndan Chemicals  
P.O. Box 610  
Mona Vale, NSW 2103

Dear Mr. Hamilton:

## Biodegradability of Deoda-Clean

We have investigated the ingredients of Deoda-Clean to determine the biodegradability of this product. The results are discussed below.

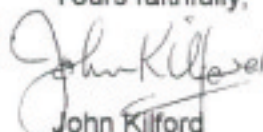

Deoda-Clean contains alkylbenzene sulphonic acid, coconut diethanolamide, sodium lauryl ether, sulfate triethanolamine, perfume, dye and inorganic materials dissolved in water. The organic materials are all readily biodegraded.

Sodium sulfate is also present. This is an end product of natural processes, and while not degradable by bacteria, the constituent parts are normally found in nature, and are taken up by plants as essential ingredients for growth. The other inorganic material, sodium tripolyphosphate similarly is not degraded by bacteria but provides nutrients essential for plant growth. Consequently neither will present any toxicity problems to the environment.

Further details may be seen on the MSDS if necessary.

We hope this information suffices for your purposes.

Yours faithfully,

  
John Kilford
