

# PICKLE IT

## Welding Stain remover

Pickling is the removal of heavy, tightly adherent oxide film resulting from hot forming, heat treatment and welding.

**Cyndan Pickle It** is a unique formulation based on the combination of Nitric Acid and Hydrogen Fluoride. The synergy between these two chemicals provides an extremely effective cleaning power for all welding stains.

Cyndan Pickle It is effective on all metals and particularly stainless steel. Stainless Steel welds are passivated which secures a protective coating and reduction in chemical post cleansing activity. The treated stainless steel, of all grades, is returned to it's natural lustre.
