Consultants to the chemical and associated industries

February 8, 1999

Mr. Danny Hamilton
Cyndan Chemicals
P.O. Box 610
Mona Vale, NSW 2103

Dear Mr. Hamilton:

Biodegradability of Power Kleen

We have investigated the ingredients of Power Kleen to determine the biodegradability of this product. The results are discussed below.

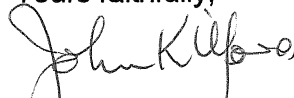

Power Kleen contains EDTA (sodium salt), sodium dodecylbenzene sulphonate, 2-butoxyethanol, sodium metasilicate and propylene glycol.

We can advise that these ingredients may be described as biodegradable, and that the claim may be readily supported.

Further details may be seen on the MSDS if necessary.

We hope this information suffices for your purposes.

Yours faithfully,

John Kilford
