

# PREVENT COSTLY CORROSION WITH

CYNDAN

# PROTECTA

## Anti-Corrosion Liquid & Protective Coating

### Anti-corrosion Treatment

Cyndan\* Protecta prevents corrosion and prolongs the life of tools, instruments, jigs and parts in storage. It seals out weather and moisture. Cyndan\* Protecta stops and prevents corrosion on battery terminals and similar cables.

### Lubricant

Cyndan\* Protecta lubricates close-fitting parts, wire ropes, cables, chains and stops squeaks.

### Non-permanent, removable coating

Cyndan\* Protecta is not a permanent coating. It is used where short to medium term protection is required and where the treatment is intended to be removed.

Cyndan\* Protecta can be applied by spray, dip or brush methods. Protecta can be removed easily by washing the treated articles with a solvent such as Cyndan\*'s "Dislodge".

The remarkable semi-permanent coating resulting from an application of Cyndan\* Protecta is a highly specialised industrial wax which is liquefied by solvent contact, yet is aggressively resistant to corrosion causing contamination.

For a more permanent coating providing longer protection, please ask your Cyndan Representative about Cyndan Metal Protective Coating.

This product is approved for use in registered export meat establishments.

# The Solution to preventing the adhesion of Construction Spatter . . .

- **SUPER EFFECTIVE**
- **SAVES HOURS OF CLEAN UP TIME**
- **ECONOMICAL**

Cyndan\* Protecta is a highly unique specialised industrial wax which is liquified by solvent contact.

**NON-PERMANENT,  
REMOVABLE COATING**

Cyndan\* Protecta is not a permanent coating. It is used where short to medium term protection is required and where the treatment is intended to be removed.

## BUILDING INDUSTRY UNIQUE APPLICATION

Cyndan\* Protecta has found a unique place in the construction industry.

Protecta is ideal for preventing the adhesion of cement and plaster slurry, paint and other unwanted spatter to metal and timber frames and most importantly, window glass. This specialised application is facilitated by the wax-like film of the Protecta being the surface on which these unwanted materials adhere as opposed to the glass or frames.

At the conclusion of the construction the Protecta can be removed with Cyndan\* Dislodge and the unwanted spatter is removed with it.

### APPLICATION

Cyndan\* Protecta should be applied to the surface which requires protecting. All surface substrates can be protected, timber, glass, aluminium, etc. The Cyndan\* Protecta should be applied liberally by use of a Chapin Sprayer or similar (see your Cyndan representative). When removal of the spatter is required, remove the Cyndan\* Protecta film with Cyndan's Dislodge. This will release the Cyndan\* Protecta film, resulting in all unwanted materials being removed from the surface. Approximately 1 litre of Cyndan\* Protecta will cover 10 square metres of surface area.

NO OTHER PROTECTIVE PRODUCT SHOULD BE ADDED TO CYNDAN\* PROTECTA EITHER BEFORE OR AFTER THE APPLICATION AS THIS WILL COMPROMISE THE LEVEL OF PROTECTION PROVIDED AND COMPLICATE THE REMOVAL PROCESS.
