SHIELD I.T.

SOLVENT BASED IMPREGNATION TREATMENT FOR STONE & MASONRY

UN 1993 HAZCHEM CODE 3[Y] PACKAGING GROUP III

This product is not a coating, it is a chemical formulation that chemically reacts with the silica capillaries of the substrate and becomes an integral part of the substrate it is protecting. CYNDAN* SHIELD I.T. is ideal for stone, brick and masonry surfaces such as concrete and tiles. CYNDAN* SHIELD I.T. protects the surface from staining and soiling. It also allows easy removal of chewing gum from any surface that has been treated. Uniquely CYNDAN* SHIELD I.T. allows the substrate to breathe yet prevents the leaching of salts from behind the treated surface. As CYNDAN* SHIELD I.T. is not a coating it does not detract from the non-slip properties of a surface or alter the natural appearance of the treated surface.

DIRECTIONS:

Clean the surface thoroughly with a CYNDAN* degreaser (please see your Cyndan representative for advice) and or an acidic wash such as CYNDAN* CONCRETE WASH if necessary. Ensure the surface to be treated is dust and oil free. The surface must be completely dry and free of all moisture prior to the application. Apply CYNDAN* SHIELD I.T. to the surface by roller, brush or low pressure sprayer. We recommend spraying. Two passes are required. The second application should be done while the first application is wet. Avoid windy conditions when spraying as this may reduce the application rate. An approximate coverage is 6 to 8 square metres per litre.

SAFETY: Avoid contact with eyes.

FIRST AID: If swallowed, do NOT induce vomiting, give a glass of water and seek medical attention. Contact the Poisons Information Centre (13 11 26 Australia; 0800 764 766 New Zealand). If in eyes, hold eyelids open and flush with water for at least 15 minutes.
