

SOIL STABILISER

Stops dust

Ecologically safe

Reduces road deterioration

Does not leach out

Adds traction in wet & dry conditions

Soil Stabiliser & Dust Controlling solution

Cyndan Soil Stabilising Solution is a powerful binding preparation that is applied to stockpiles, embankments, unpaved roadways & shoulders, yard areas, landscaped areas, streetscapes and parking lots. It penetrates, saturates and bonds surface dust and aggregate together to create a complete, dust free, water resistant and resilient surface.

Soil Stabilising Solutions's unique effectiveness is the result of the length and strength of it's molecules and their ability to bond with soil material. It is made of a blend of five polymers consisting of molecules linked in chains and grids that are up to 1,000,000 molecules long. It encapsulates small particles with it's powerful chemical binding ability and is up to 10,000 times greater than calcium based dust suppressants or surfactants and wetting agents.

Soil Stabilising Solution adds traction and safety in both wet and dry conditions. It provides maximum resistance to rain, UV light and wind. It is easy to apply and will not wash away or leach out. Soil Stabilising Soution will not become brittle or pothole, thus reducing road surface deterioration. It is ecologically safe and accepted and will not pollute underground water supplies.

Use on:

- ✓ **Stockpiles**
- ✓ **Embankments**
- ✓ **Unpaved roads & shoulders**
- ✓ **Yard areas**
- ✓ **Parking Lots**
- ✓ **Driveways**
- ✓ **Landscapes**
- ✓ **Streetscapes**
