SPA-BATH TREATMENT

9.9% QUANTERNARY AMMONIUM COMPOUND COMMERCIAL SANITIZING CONCENTRATE

Cyndan Spa-Bath treatment is certified to kill gram negative and gram positive bacteria such as staphylococcus aureus and escherichia coli when diluted with 75 parts water. Cyndan Spa-Bath Treatment is excellent for the cleaning and sanitizing of refillable spa-baths. This cleansing and sanitizing action is required due to the fact that water residues remain in the pumping mechanism and are injected into the bath the next time it is used. This is a source of cross contamination of the water and is very unhygienic. Water is an ideal medium in which germs can multiply and flourish. This is especially true and is made worse in warm water as is found in spa baths. Spa baths that are not attached to a filtering or chlorinating system such as home spas are a constant source of contamination. As the bath is emptied some water remains in the pumping mechanism and is injected into and mixed with the clean water the next time the bath is used.

DIRECTIONS:

To kill bacteria and sanitize.

Fill the spa to a level just above the jets. If possible, turn off air blower. It is not recommended to fill the bath to operating capacity. Add 1L of Cyndan Spa-Bath Treatment for every 75L of bath capacity. 1.5L is normally adequate, depending on spa size, as the water volume when the spa is filled to the cleaning capacity will be approx. 110L. Allow the treatment to circulate for 3-5 minutes. Empty bath and clean in the normal manner. In a home or private application this sanitizing procedure can be done after the bath has just been used as opposed to the bath being filled specifically for this cleaning process. It is ideal in a commercial/hospitality situation to use Cyndan Spa-Bath Treatment each time the bath is used by a guest and prior to the next guest's occupation. As a minimum, the process should be carried out monthly if the spa has been used. To establish if the bath has been used please use the complimentary indicator stickers.

SAFETY: Avoid contact with eyes.

FIRST AID: If swallowed, do NOT induce vomiting, give a glass of water and seek medical attention. Contact the Poisons Information Centre (13 11 26 Australia; 0800 764 766 New Zealand). If in eyes, hold eyelids open and flush with water for at least 15 minutes.
