ACID/DETERGENT BASED CLEANING SYSTEM

A POWERFUL COMBINATION OF ACIDS AND FLUORIDES FOR EFFECTIVE CLEANING AND BRIGHTENING OF METALS AND OXIDISED PAINTED SURFACES

DIRECTIONS:

CYNDAN* SPECIALISED ACID WASH should be diluted with 15 parts of water. The mixed solution should be applied by brush or spray and worked onto the surface by working from the bottom to the top. Allow the product a few minutes to penetrate the dirt and corrosion then rinse off with water. Assistance with brushing or brooming may be necessary if the soiling is particularly stubborn. CYNDAN* SPECIALISED ACID WASH can then be used for periodic maintenance in a much weaker solution. Testing should take place before any stronger solutions are used in order to gauge the reaction as damage could occur to certain porcelain, glass, polished aluminium, or tiled surfaces in heavily concentrated forms.

SAFETY: Corrosive. Avoid contact with eyes and skin. Wear protective clothing, gloves and eye protection.

FIRST AID: If swallowed, do NOT induce vomiting, give a glass of water and seek medical attention. Contact the Poisons Information Centre (13 11 26 Australia; 0800 764 766 New Zealand). If in eyes, hold eyelids open and flush with water for at least 15 minutes. If skin contact occurs, remove contaminated clothing and rinse for 15 minutes with soap and water. Ensure clothing is washed thoroughly before using again.
