Consultants to the chemical and associated industries

February 8, 1999

Mr. Danny Hamilton
Cyndan Chemicals
P.O. Box 610
Mona Vale, NSW 2103

Dear Mr. Hamilton:

Biodegradability of Squeaky Clean Liquid

We have investigated the ingredients of Squeaky Clean Liquid to determine the biodegradability of this product. The results are discussed below.

Squeaky Clean Liquid contains alkylbenzene sulphonic acid, coconut diethanolamide, sodium lauryl ether sulphate and urea, dissolved in water.

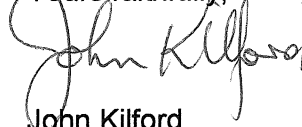

We can advise that the product may therefore be described as biodegradable, and that this claim may be readily supported.

Further details may be seen on the MSDS if necessary.

In addition, the product is in the pH neutral zone (ie between about 5 and 9).

We hope this information suffices for your purposes.

Yours faithfully,

John Kilford
