# WETTING AGENT

## SOIL CONDITIONER AND WETTING AGENT

### DIRECTIONS:

Dilute 1 part Cyndan Wetting Agent with approximately 1000-120 parts of water. 1L of this dilution will treat 350 square metres.

For best results treat the area two times per year approximately every 6 months. For localised dry spots and heavily compacted areas a repeat application may be necessary.

To prevent dew formation use Cyndan Wetting Agent diluted with 4 parts of water. Repeat this process when necessary.

This product may be used in conjunction with other Cyndan chemicals such as fungicides, herbicides, insecticides and soluble fertilisers.

**SAFETY:** Avoid contact with eyes.

**FIRST AID:** If swallowed, do NOT induce vomiting, give a glass of water and seek medical attention. Contact the Poisons Information Centre (13 11 26 Australia; 0800 764 766 New Zealand). If in eyes, hold eyelids open and flush with water for at least 15 minutes.
